

KinoOrdo

SIMPLE BOOKING FOR CINEMA SEATS.

Final project for the Database course

Made by Arsen Zhursunov

Problem & Motivation

WHY THIS PROJECT MATTERS

- Manual ticket booking is slow and inconvenient.
- Users need a fast way to check what is playing now.
- Seat availability must be accurate in real time.
- Administrators need simple tools to manage movies and sessions.

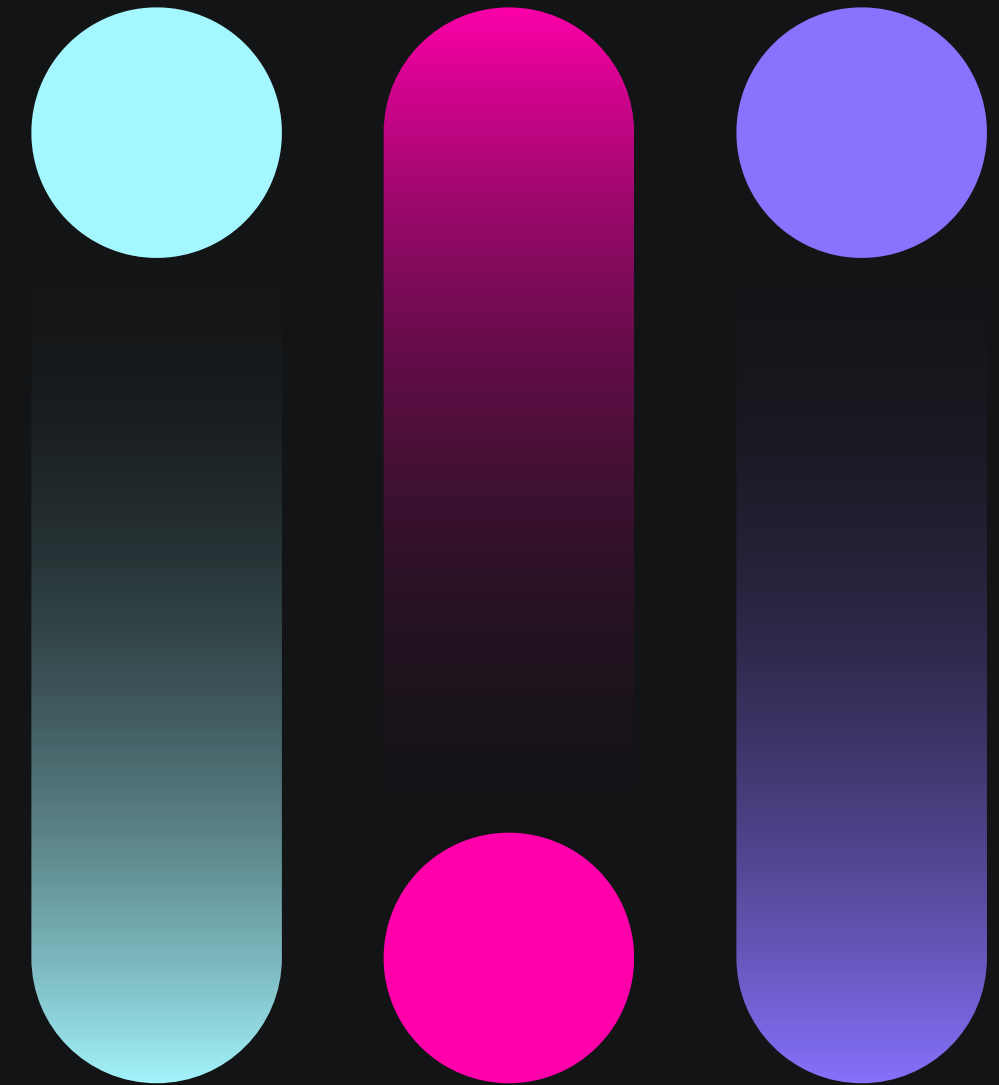

Problem & Motivation

WHAT THE SYSTEM IMPROVES

- One interface for browsing, booking, and managing reservations.
- Centralized database for all cinema data.
- Prevents double booking by design.
- Makes the workflow easy to demonstrate in a database project.

Web Support

- Movies: Search and filter by genre
- Showtimes: See sessions by film
- Seats: Visual hall layout
- Bookings: Track reservations

Home → Movie details → Showtime selection → Seat map → Reservation → My bookings

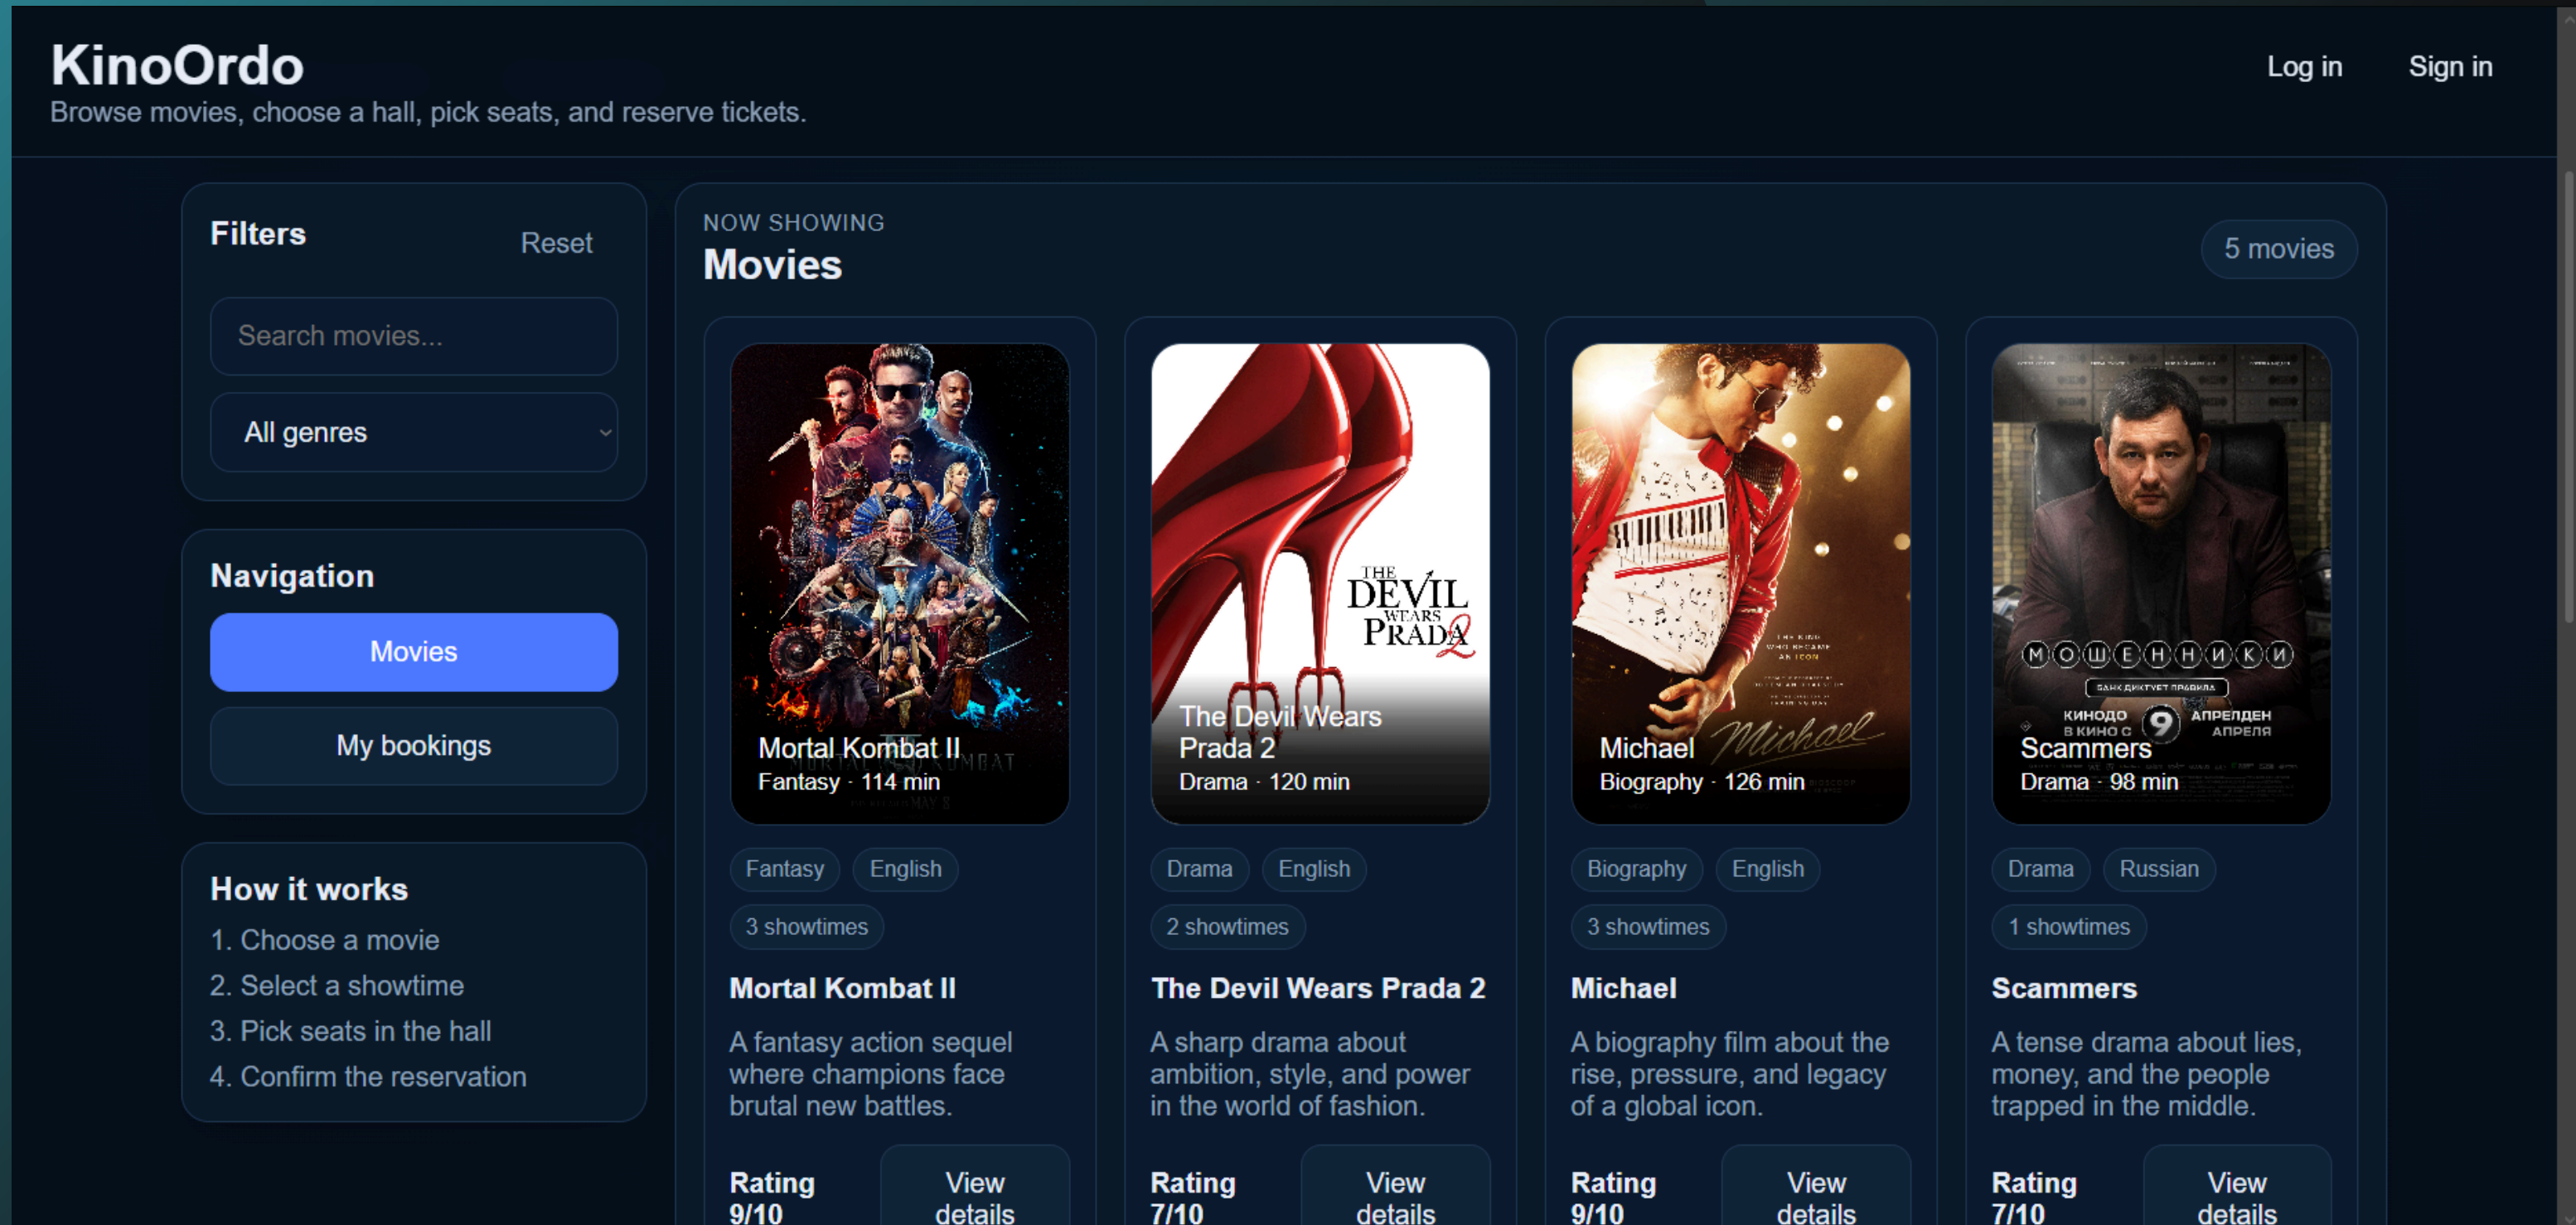

System Architecture

- Frontend: HTML, CSS, JavaScript
- Backend: Node.js
- Database: PostgreSQL
